

THAMIL ALAGAN R

Frontend React Developer | MERN Stack Developer

Coimbatore, Tamil Nadu, India | +91-9080445205 | thamizhalagan8@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Frontend / MERN Stack Developer with 3 years of professional experience building scalable web applications using React.js, JavaScript, TypeScript, Redux Toolkit, Node.js, Express.js, MongoDB, and REST APIs. Deployed 2 production Shopify applications and Experienced in developing reusable UI components, responsive user interfaces, third-party API integrations, and end-to-end full-stack solutions. Strong expertise in React-based frontend architecture, state management, and API integration. Skilled in building maintainable full-stack applications, integrating third-party services, and collaborating with cross-functional teams in agile development environments. Well-versed in component lifecycle and modular architecture, and established design patterns to keep codebases maintainable and scalable.

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, React Router, React Hooks, Responsive Web Design, Reusable Components, Component Lifecycle & Rendering Behaviour, Form Handling & Validation, Error Boundaries, React Best Practices and Webflow

State Management: Redux Toolkit, Context API

Backend: Node.js, Express.js, REST APIs, MongoDB

API & Integrations: REST APIs, Axios, Third-Party API Integration (Meta Webhooks, FedEx API)

Tools: Git, GitHub, Postman, VS Code

Core Concepts: Component-Based Architecture, CRUD Operations, Performance Optimization (memorization, Lazy Loading, Code Splitting), Debugging, Cross-Browser Compatibility, Clean Architecture, Design Patterns, Modular Architecture, Asynchronous Programming (Async/Await), ES6 Modules (Import/Export)

PROFESSIONAL EXPERIENCE

MERN Stack Developer | [La Confianza Tech](#) Oct 2024 – May 2026

- Developed and maintained 2 production full-stack Shopify applications using React.js, Node.js, Express.js, and MongoDB for shipping automation and WhatsApp-based merchant communication workflows.
- Built **Sendoship**, a custom Shopify shipping app featuring 4 core modules — shipping services, real-time rate calculation, shipment creation, and a real-time dashboard — serving merchants with live FedEx shipping rate data.
- Developed **Pingcart**, a WhatsApp Business Shopify app; led dashboard UI development and real-time data display from Meta Webhooks, integrating 5+ frontend-backend API endpoints across 3+ communication and notification modules to support merchant messaging workflows.
- Integrated Meta Webhooks and event-driven workflows for order lifecycle events (sent, delivered, and read status updates), enabling real-time merchant visibility in the dashboard for 100% of order events.

- Managed component lifecycle and rendering behaviour across dashboard views, and applied performance optimization techniques — memorization to improve load times on data-heavy screens.
- Implemented form handling and validation for shipment and merchant-configuration workflows, and used error boundaries to isolate UI failures and follow React best practices for resilient components.
- Worked across both frontend and backend modules, contributing to API integration, business logic implementation, and UI workflows — one of 2 developers on Sendship and one of 4 developers on Pingcart.
- Utilized Git and GitHub for version control and release management across 2 concurrent projects, maintaining a structured branching strategy that supported parallel development between a 2-member and a 4-member team without code conflicts.

Frontend Developer | **Squash Apps** Jul 2023 – Oct 2024

- Engineered frontend modules using React.js and Redux Toolkit, enhancing user experience and streamlining workflows to reduce task completion time by 40%.
- Created 8 frontend modules/screens across 2 applications, covering user workflows, data management views, and responsive UI features.
- Integrated 10+ REST API endpoints across both projects to support CRUD operations, state-driven workflows, and dynamic data rendering using Redux Toolkit and Axios.
- Established and maintained a library of 10+ reusable UI components; refactored frontend codebase to eliminate code duplication, reducing redundant code across modules and improving long-term maintainability across 2 production applications.
- Used React Router for multi-view navigation and applied async/await concepts to manage asynchronous data flows and API calls efficiently.
- Collaborated with UI/UX designers and backend developers to deliver 8 responsive screens across 2 applications; contributed to debugging, QA testing, and production feature rollouts, ensuring zero critical UI defects at launch.

KEY PROJECTS

Sendship – Shopify FedEx Shipping App

- Built a custom Shopify shipping application with 4 modules for shipping services, rate calculation, shipment creation, and dashboard monitoring.
- Implemented FedEx API integration for real-time shipping rates and shipment workflow operations, including cancellation and shipment-related actions.
- Constructed a dashboard displaying operational counts for shipments, cancellations, fulfilled, and unfulfilled orders, improving merchant workflow visibility.

Pingcart – WhatsApp Business Shopify App

- Designed dashboard UI modules to display real-time WhatsApp communication data (sent, delivered, read statuses) from Meta Webhooks.
- Connected frontend and backend APIs across multiple notification workflows to support merchant communication features.
- Contributed to Shopify app workflows for order-related notification templates via WhatsApp to merchants.

Education Portal – Student & Educator Learning Platform

- Architected 5+ frontend modules for an online education portal to facilitate seamless and interactive learning experiences for students and educators.
- Adopted TypeScript for type safety and improved code reliability across all frontend components and API interactions.
- Managed application state using Redux Toolkit and integrated REST API endpoints using Axios for dynamic data rendering.

Hospital Appointment Management – Healthcare Scheduling System

- Crafted a responsive hospital appointment management interface using React.js and TypeScript, covering patient records, doctor scheduling, and appointment booking workflows.

- Applied Redux Toolkit for centralized state management across patient records, appointments, and scheduling workflows.
- Ensured cross-browser compatibility and responsive design across all screens, improving usability for clinical staff.

EDUCATION

Bachelor of Engineering (Civil Engineering) | SriGuru Institute of Technology, Coimbatore | 2014 – 2018
